

Supplemental Figure 1: Sagittal brain section from the zebra finch atlas (Karten et al., 2013).

The dashed red line represents the reference line that was drawn from the most dorsal aspect of the striatum to the most caudal portion of the nidopallium (close to the ventral tip of the hippocampus), and a line parallel to this line was used to measure the rostral-caudal placement of the cannula. The depth of the cannula was measured along an axis perpendicular to this line. Inset image is a histological section from an experimental animal with an implanted cannula.
